

## UPSTREAM OIL & GAS

Intecsa Industrial has participated in the Engineering, Procurement and Construction of onshore oil and gas field development, oil and gas processing terminals, and underground gas storage.

We have successfully delivered upstream oil and gas projects in Middle East, Africa, North Sea, Asia and the Americas, including some of the world's largest gas field and gas processing developments.

### Gas Processing

Intecsa Industrial is specialized in the design and construction of world scale gas treatment complexes. Our technical expertise comprises the development of gas processing

projects from production facilities both onshore and offshore.

### Oil Production

Our services in this area are mainly focused in turnkey EPC solutions. Intecsa Industrial designs and constructs all types of facilities for the development of onshore oil and gas fields. From wellheads to treatment centers and from product transportation to export facilities, covering Gathering lines, Manifolds, Gas-oil separation plants (GOSPs), Pumping and compression stations, Oil storage and unloading terminals, Sour oil and gas processing, Natural gas processing and treating.
