Fine Chemicals

PETROCHEMICALS & FINE CHEMICALS

Intecsa Industrial has experience in a broad range of product facilities; however we emphasize our considerable experience in olefins, aromatics, fibre intermediates (TA and PTA), polycarbonates and other polymers.

We have experience in fine chemicals, such as Isoprene, Styrene Monomer, Isopropane, and Butadiene.

Intecsa Industrial has significant expertise in different stages of the aromatics production, from feedstock preparation, through reaction units, up to aromatics separation, such as Phenol,

Benzene extraction and Xylene isomerization, all executed with full and final customer satisfaction, demonstrating Intecsa Industrial high level of expertise.

Olefins has been the core of Intecsa Industrial experience in the petrochemical sector with a big list of references in Ethylene derivatives, such as Ethylbenzene, Ethylene Glycols and Polyethylenes.

Propylene associates, such as Polypropylene and Polyols have been a prominent part of our trackrecord.
