

# PETROLEUM REFINING

Intecsa Industrial provides a widespread range of refinery processes solutions acquired in our 50 years of global experience in grass root, revamp, expansion and petroleum refining projects. Through this experience we have successfully delivered a vast number of refining projects all over the world, ranging from conceptual technical and economic studies to commissioning and start up.

Intecsa Industrial has also completed an extensive range of LSTK-EPC projects, which included Engineering, Procurement and Construction services, in all of the Spanish Refineries and in other refineries across all the continents.

From a process technology point of view, Intecsa Industrial has large experience in, either open art technologies or with most important process licensors.

Intecsa Industrial has also considerable experienced in the design of refining ancillary units such as sour water, gas treating, sulphur recovery and utilities. To meet customer requirements in today's competitive world, we supply innovative, cost-effective, and safe solutions.
