

# ENERGY & POWER PLANTS

## Combyned cycle

The facilities within which our company has undertaken its activity add up to total power of close to 9000 MW. This participation covers everything from Property engineering to the "Turn-key" execution and management of the project.

## Conventional Thermoelectric Power Plants

Intecsa Industrial is an important benchmark company in the national market through its own merits, having actively participated in the engineering of the majority of the plants undertaken throughout Spain.

## Concentrated Solar Power Plants

Solar Thermal Power Plants have come to the fore of the future of the energy sector. Intecsa Industrial has been committed since the very beginning to the challenge of this technology, acquiring a know-how indispensable to continue innovating in this area.

## Biomass Thermoelectric Power Plants

Our company is firmly committed to the elevated potential of biomass and invests in technological innovation to provide quality services and integral solutions in accordance with the demands of our clients.
